

mu

mean effect

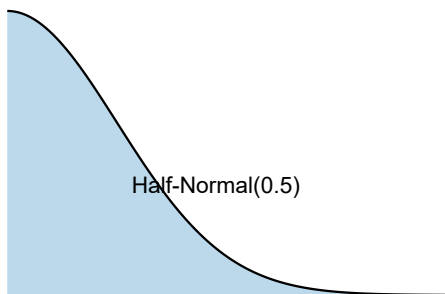

vague

tau

heterogeneity between strata

Half-Normal(0.5)

~

$$\theta_A, \theta_B \sim \text{Normal}(\mu, \tau^2)$$

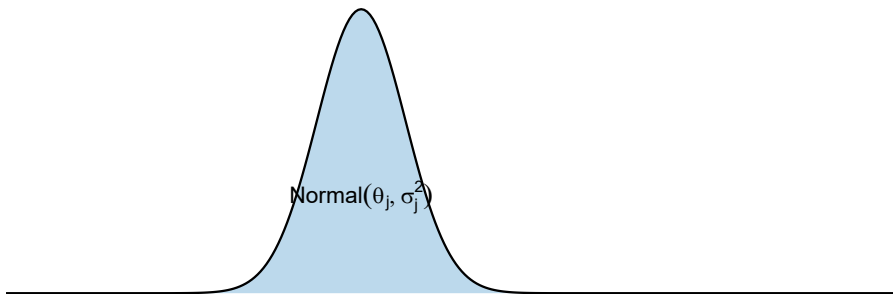

true effect of each stratum, shared through mu

likelihood

observed log hazard ratio

$\text{Normal}(\theta_i, \sigma_j^2)$

y_A, y_B : data (strata A and B)
